Installations and designs customised for the client

ABR IMPIANTI has been in business in the electrical and instrumentation systems field since 1994, providing services to the major categories of industry and the service sector.

ABR IMPIANTI is based on the experience in the energy industry (more than twenty years) of its professionals, engineers and technicians.

This has enabled an organisation to be created that is capable of offering a high quality, innovative and flexible service and meeting the most wide ranging needs of its customers, needs that are satisfied through a “modus operandi” which starts with the requirements for each individual order and are fulfilled by using the appropriate expertise, providing added

value in greater environmental safety and quality of life. The company culture which makes service standards of this type possible is based on solid foundations, the constant desire to provide solutions which enable customers to improve their own business, whether they need to increase the reliability of an electrical installation or boost factory productivity.

RELIABLE REPUTATION

ABR IMPIANTI makes technical resources, professional skills and project leadership available and can rely on extremely flexible ingeniousness and dependable performance. For this reason it is able to guarantee high quality and safety standards, against a background of compliance with all relevant standards and legislation, which results in total customer satisfaction.

ABR IMPIANTI is equipped to provide the Customer with turnkey electrical, instrumentation and automation installations on request. For this purpose, it uses its own project management, cost control and materials procurement organisation, supported by dedicated software and hardware facilities.

The company has also acquired significant experience as main contractor in the completion of turnkey technical installations (electro-instrumental etc., thermal engineering etc. building and mechanical).
